

Together we make a difference.

These days, everywhere we turn we are asked to be conscious of the environment. Truth is, the past few decades have seen a much greater use of plastics in consumer goods, items that contain resins that resist bio-degradation. This means when plastics go to landfills, they remain in their original form forever.

Here's the good news: Your local drycleaner is taking steps to change this with Eco-Green Garment Bags.

What is ECO-GREEN?

Unlike traditional poly packaging bags, ECO-GREEN™ is made to be an earth-friendly product. It protects garments exactly like any other bag, but breaks-down once the product finds its way to a landfill, compost, or natural body of water. It's perfect for your clothes – and the environment!

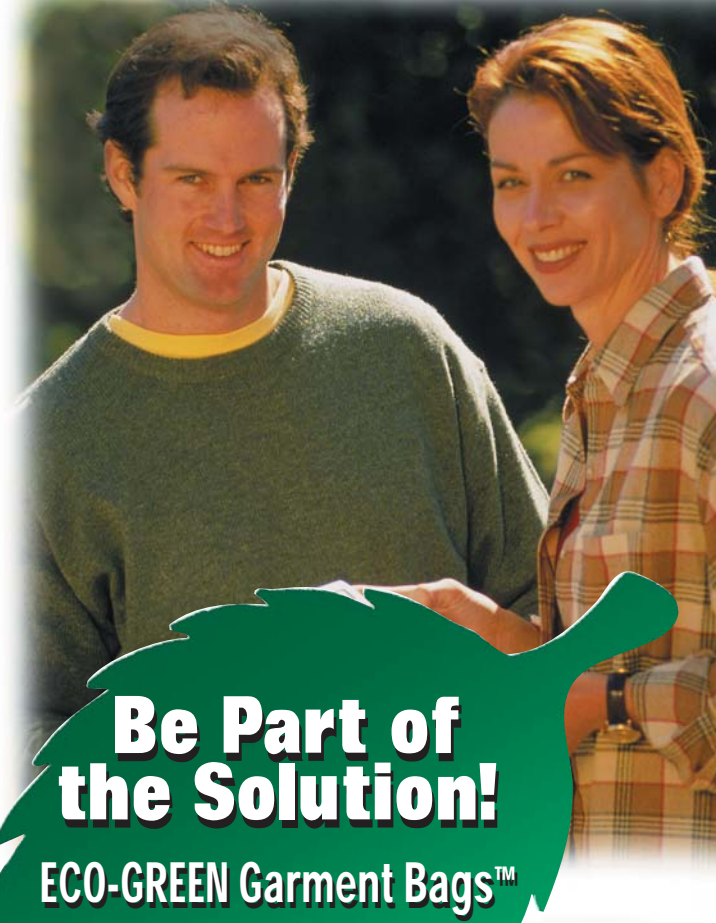

How does it work?

To simplify, a method is used to treat the standard plastic so that micro-organisms will consume it, assimilating the material for cellular processes and producing metabolic products like methane, carbon dioxide and water. Standard plastic will never break down like this.

Be assured, this process does NOT happen in your closets at home, or on your clothes in any manner. It's perfectly safe!

Eco-Green
GARMENT BAGS™

Packaging Solutions for A Cleaner World

**Be Part of
the Solution!**

ECO-GREEN Garment Bags™

**ENVIRONMENT-FRIENDLY
PACKAGING**

All the advantages of plastic with a safer alternative for our environment. Now, when you get your clothes cleaned you can dispose of your garment bags with peace of mind.

• **Biodegradable** • **Compostable** • **Recyclable**
